

Plugin A Link

This wiki plugin, available since Tiki1, creates a link to an anchor in a wiki page. Use in conjunction with `PluginAname`, which creates the anchor, or link to a wiki heading.

Starting with Tiki2, Tiki automatically creates an anchor for each wiki heading. You can use the `PluginAlink` to link to any heading on a wiki page *without having to use a corresponding PluginAname*.

Parameters

Create a link to an anchor

*Introduced in Tiki 1. Required parameters are in **bold**.*

[Go to the source code](#)

Preferences required: wikiplugin_alink

Parameters	Accepted Values	Description	Default	Since
(body of plugin)		Anchor link label.		
aname		The anchor name as defined in the Aname plugin.		1
pagename	pagename	The name of the wiki page containing the anchor. If empty, the anchor name will be searched for on the wiki page where the plugin is used.		1

Example

Aname Plugin Usage

{ANAME()}

nchorname <--put the name of the anchor here. Use this same name for the `aname=` parameter in the Plugin Alink (see just below).

{ANAME}

ANAME example: {ANAME()}anchorname{ANAME}

Alink Plugin Usage

{ALINK(

aname=anchorname <-- put here the name of the anchor you created using the Plugin Aname!

)}

link text <-- put here the text to appear as the link.

{ALINK}

ALINK example: {ALINK(aname=anchorname)}link text{ALINK}

Demonstration

To jump down to the anchor at the bottom of the page click **HERE**. <-- Here is where I put the `ALINK` plugin in this page.

Here is a second link to the same anchor at the bottom of the page. Again, I used the `ALINK` plugin.

The anchor is here. <-- I put the ANAME plugin at the beginning of this line. Now you can click HERE to jump to the anchor I put at the top of the page (you can't see where that one is unless you look into the page editor
