# Plugin Group

Use this wiki plugin to display content based on the user's groups or friends. It is similar to PluginPerm.

#### **Parameters**

Display content based on the user's groups or friends Introduced in Tiki 1.

Go to the source code

Preferences required: wikiplugin\_group

Parameters	<b>Accepted Values</b>	Description	Default	Since
body of plugin)		Wiki text to display if conditions are met. The body may contain {ELSE}. Text after the marker will be displayed to users not matching the conditions.		
groups	groupname separator:	Select one or more groups allowed to view the block.		1
notpending	groupname separator:	Select one or more groups. Users will be allowed to view the block if their membership in all of the selected groups is not pending.		13.0
pending	groupname separator:	Select one or more groups. Users will be allowed to view the block if their membership payment to join the groups is outstanding.		13.0
friends	username separator:	Select one or more users. Friends of these selected users will be allowed to view the block.		4.0
users	username separator:	Select one or more users allowed to view the block.		27
notgroups	groupname separator:	Select one or more groups not allowed to view the block.		1

### Notes on usage

- The {ELSE} part is optional.
- The groups and notgroups parameters may be used at the same time.
- Groups can be included in other groups, and this can impact how this plugin behaves. For example, if you want a section to be seen by the group A and the group Admins ( groups="Admins|A" ), and not by group B ( notgroups="B" ), be careful not to include group B in the Admins group . If Admins includes A and B, Admins will not see the section.

# Examples

# Basic syntax

{GROUP(groups="Registered|Admins" notgroups="Editors")} show this content for users included/excluded from groups specified in the parameters{ELSE} otherwise show this content{GROUP}

## Security

Ise of this plugin to hide sensitive information will not prevent it from being revealed to users with permissions to view or edit the page source. Users that have a Watch on the wiki page will receive an email with the entire wiki page source, thus revealing the information regardless whether the content would be hidden because of this plugin.
