

Plugin Language

Use the wiki plugin to vary content based on the page language.

Parameters

Show alternative content based on the page language

Introduced in Tiki 1.

[Go to the source code](#)

Preferences required: feature_multilingual, wikiplugin_lang

| Parameters | Accepted Values | Description | Default | Since |
|----------------|-----------------|---|---------|-------|
| body of plugin | | Content to show | | |
| lang | | List of languages for which the block is displayed. Languages use the two letter language codes (ex: en, fr, es, ...). Use <code>+</code> to separate multiple languages. | | 1 |
| notlang | | List of languages for which the block is not displayed. Languages use the two letter language codes (ex: en, fr, es, ...). Use <code>+</code> to separate multiple languages. | | 1 |

Note

Cached pages don't render this plugin correctly. Do not cache the page that this plugin is used on.

Examples

Based on language

{LANG(lang="en")}{Hello}{LANG} {LANG(lang="fr")}{Bonjour}{LANG}

If the current language is en (English), "Hello" will be displayed. If it is fr (French), "Bonjour".

Based on language and not language

This code:

```
{LANG(lang="fr")}{Bonjour le monde!}{LANG}{LANG(lang="es")}{iHola,  
mundo!}{LANG}{LANG(notlang="fr+es")}{Hello world!}{LANG}
```

Would produce on this site:
Hello world!

With PluginTranslated

The language can match the `lang` url parameter. So if you couple this plugin with the PluginTranslated, you can have a kind of multilingualism:

```
{LANG(lang="fr")}{en Français}{LANG} {LANG(lang="en")}{in English}{LANG} --- (page break)
```

```
{TRANSLATED(flag="France" lang="fr")}{./tiki-index_raw.php?page=MyPage&lang=fr|>>} {TRANSLATED}
```

```
{TRANSLATED(flag="United_States" lang="en")}{./tiki-index_raw.php?page=MyPage&lang=en|>>} {TRANSLATED}
```
