

## File Gallery for Images

Since [Tiki3](#), file galleries have more features to support image galleries also from your local images. For images already elsewhere in internet, use the simple `{img src=http://domain/foo.jpg}` as usual.

### Enable the setting

First an admin has chosen file galleries to manage images also. This option can be enabled at "Admin home > Editing and Plugins > General settings" (**tiki-admin.php?page=textarea**): "Use File Galleries to store pictures".

Let's see an example of this new usage of the file galleries.

## 1.1. Upload an image

### 1.1.1. Through editing a wiki page

In [Tiki3](#), you could do that through the following option of the wiki edit interface:

The screenshot shows the Tiki3 wiki edit interface. At the top, there is a text area containing the following text: `!!# Add .htaccess for all (optional)`, `You can also add a single customized .htaccess for them`, `all at the MultiTiki root`, and `See ((Rewrite rules))`. Below this text area, there is a section for editing the page. It includes a text input field for "Edit Comment:", a checkbox for "Monitor this page:", and a section for "Upload picture:". The "Upload picture:" section contains a blue button labeled "Add another image", which is circled in red. Below this, there is a text input field for "Upload file:", a "Navega..." button, a "Comment:" text input field, and an "Attach" button. At the bottom, there are three buttons: "Preview", "Save", and "Cancel Edit".

Starting in [Tiki4](#), and being improved in [Tiki5](#), the edit interface has been revamped and you can open the form to upload images through the appropriate icons in the toolbar area on top of the editing area of the wiki page:  

The first one, , opens the plugin helper to add references to images available on Internet somewhere (inside or outside tiki).

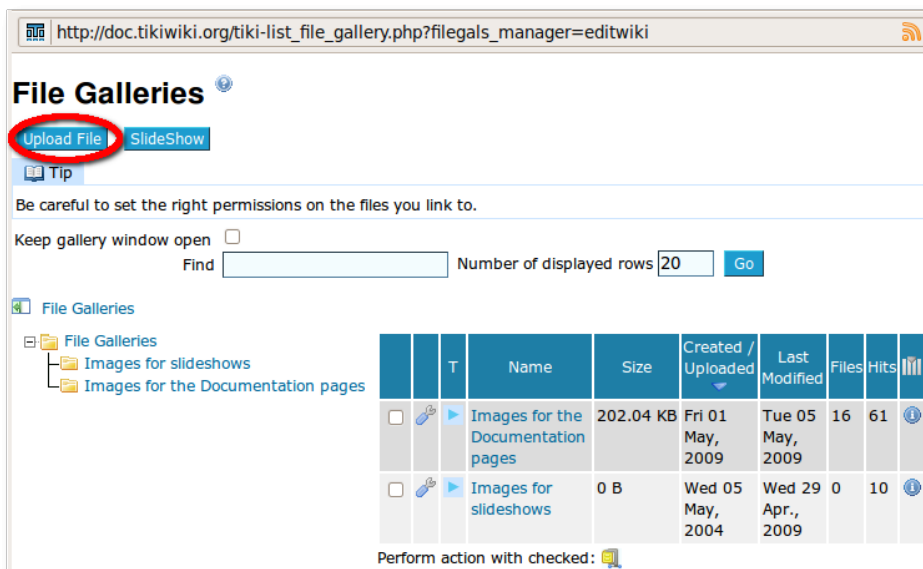

The second one, , opens the interface to upload images. By default, that interface shows in the basic mode to allow uploading a single image:

However, if we click on the appropriate button on top of the previous type of window, we will see the advanced interface to upload several files with images at once or even a single compressed zip file with many images to be processed in batch mode, as well as selecting the user or categories to link those images to.

### 1.1.2. Directly through file galleries

### 1.2. Select the image/s to upload from disk

Chose file (step 1 in the image below), file gallery to set the image to (step 2), optional parameters (step 3, quite self explained), and click on upload (step 4).

**Upload File** \*3

[List Galleries](#)

File Title: \*

File Description: \*

Upload from disk: Navega... 1

Unzip zip files ☐ \*

File Gallery: Images for the Documentation pages 2

[Select Categories](#) \*

Upload Add File \*

4

Maximum file size is limited to: 10 MB

### 1.3. Get the link and syntax to use that image

Once the image is successfully uploaded, you will see a screen like the following:

[http://doc.tikiwiki.org/tiki-upload\\_file.php?filegals\\_manager=editwiki](http://doc.tikiwiki.org/tiki-upload_file.php?filegals_manager=editwiki)

**Upload File** ?

[List Galleries](#)

**wikistructure\_00.png (67.37 Kb)**

[Additional Info](#)

Maximum file size is limited to: 10 MB

There you can click on the button "**Additional info**", and it will display the links and syntax you need to copy in order to re-use that image in your wiki page, forum, tracker, etc., or in external web sites.

## Upload File

List Galleries

wikistrukture\_00.png (67.37 Kb)

Additional Info

(Hide)

You can download this file using:

```
http://doc.tikiwiki.org/tiki-download_file.php?fileId=22
```

You can link to the file from a Wiki page using:

```
[tiki-download_file.php?fileId=22|wikistrukture_00.png (67.37 Kb)]
```

You can display an image in a Wiki page using:

```
{img src="tiki-download_file.php?fileId=22&preview"
alt="wikistrukture_00.png (67.37 Kb)"}

```

You can link to the file from an HTML page using:

```
<a href="http://doc.tikiwiki.org/tiki-
download_file.php?fileId=22">wikistrukture_00.png (67.37 Kb)</a>

```

Proceed as usual then onwards. Keep in mind that if you add png images with transparencies, then many url's shown by tiki from file galleries have the **&preview** or **&thumbnail** attached to them, and thus, they will be converted to .jpg (without transparency) by GD on the fly for that modified smaller display. Just remove that param if you wish and the png will be shows as png.

You can also add the extra param "class=reflect" for nice visual effects if you have [jQuery](#) and its corresponding JQuery plugin enabled in your site.

## Use existing images

Moreover, in order to use existing images from file galleries you can just use the url of the file, for instance, and use the IMG tag as usual:

Filename	Created / Uploaded	Last Modified	Files	Hits
htning_icon_benji_par_01.png	Mon 04 May, 2009	Mon 04 May, 2009	36	36
enzione_architetto_fr_01.png	Mon 04 May, 2009	Mon 04 May, 2009	42	42
ef4p_email_frolland_01.png	Mon 04 May, 2009	Mon 04 May, 2009	33	33
enzione_white_bg.png	Mon 04 May, 2009	Mon 04 May, 2009	50	50
htning_white_bg.png	Mon 04 May, 2009	Mon 04 May, 2009	52	52
efono_white_bg.png	Mon 04 May, 2009	Mon 04 May, 2009	51	51
doctwo_30_news.png	Mon 04 May, 2009	Mon 04 May, 2009	320	320
two_30_news.png	Mon 04 May, 2009	Mon 04 May, 2009	311	311

You will also have the option to display the image in preview mode when passing your mouse pointer over each image.

## Gallery: Images for the Docum

Screenshots and other images for the Documentation pages

[List Galleries](#)[Browse Images](#)[Upload File](#)

Tip

Be careful to set the right permissions on the files you link to

Keep gallery window open ☐

Find

File Galleries > Images for the Documentation pages

	T	Filename
<input type="checkbox"/>		lightning_icon_benji_par_01.png
<input type="checkbox"/>		attention_benji_par_01.png
<input type="checkbox"/>		telefono_email_frolla.png
<input type="checkbox"/>		attenzione_white_bg.png
<input type="checkbox"/>		lightning_white_bg.png

Or you can use the new image browser within the file galleries, which will allow you to, while editing a wiki page, click on an image from the image browser from the file gallery window and insert the needed code to display where you had your cursor.

## Additional settings and Parameters

## Wiki markup to be passed to the

When editing a wiki page and uploading an image via the [img/image wikiplugin](#), Tiki will insert the image as a thumbnail by default. This behavior can be customized per gallery. Just go to the File Gallery of your choice, edit the gallery and look for the setting labeled:

“Wiki markup to enter when image selected from file gallery manager” update the default wiki code to whatever you prefer.

For example, to insert by default images at full size instead of thumbnails, set the default to:

**Change the default for inserting an image on a wiki page**

```
{img fileId="%fileId%"}
```
