

Improve Tracker Forms

You can improve tracker forms enabling an experimental jquery user interface library called "**Chosen**"

Enable the feature

You can enable the feature in:

Admin home > Features > Interface (tab) > jQuery plugins and add-ons > Experimental > jQuery-ui Chosen Menu

Global featuresInterfaceProgrammerNo Tabs

Drop downs

You can choose a value from a dropdown box by selecting the items in the list through scrolling down, as usual, or you can nowadays filter the list values based on the text you type at the top.

The screenshot shows a form with several fields. The 'Importance' field has a dropdown menu open, displaying a list of values from 1 to 10. The value '4' is currently selected and highlighted in blue. The dropdown menu also includes a search bar at the top for filtering the list. Other fields visible include 'Subject', 'Easy to solve?', 'Feature', 'Category', and 'Tiki Version'.

Subject *

Subject or short summary of the issue (max 255 characters)

Importance 4

10: Popular problem, no workaround on default install 5: An annoying problem, no workaround 1: Edge case or rare workaround

1 low

Easy to solve?

Multiple selection

Similarly, a section to allow multiple selection of items can be shown in a small but enhanced dropdown box, which allows the user to select one or many of the options, remove them from the list in the text field at the top:

The screenshot shows a form with several fields. The 'Easy to solve?' field has a dropdown menu set to '5'. The 'Feature' field has a text input with 'Accounting' and 'Article' selected. The 'Category' field has a multiple selection dropdown menu open, displaying a list of categories. The 'Category' field also has a search bar at the top for filtering the list. Other fields visible include 'Tiki Version'.

Easy to solve? 5

10 Easy: 5-10 minutes to fix, no risk of regression, etc. 5 Medium: a few hours 1 Difficult: Requires days of work

Feature

Accounting ✕ Article ✕

Filtering displayed options by typed text

Additionally, you can also filter the values displayed in the dropdown so that only those matching your typed text are shown in the list (only the ones starting with "D" in the example below: Documentation and Dogfood a *.tiki.org site).

The screenshot shows a search filter interface with the following elements:

- Easy to solve?**: A dropdown menu with the value **5**.
- Feature**: A text input field containing **Accounting** and **Article**, each with a close button (X).
- Category ***: A dropdown menu with a blue border and a list of options: **Bug: Regression**, **Bug: Usability**, **D**, **Documentation (or Advocacy)**, and **Dogfood on a *.tiki.org site**. A mouse cursor is pointing at the **D** option.
- Tiki Version**: Two checkboxes, **10.x** and **11.x**.

Below the filter interface, the text "Click to expand" is visible.
