

Integrator Details

Requirements

1. In php.ini `track_errors` should be `On` to be able to show integration error messages in a convenient way (-
+\$php_errormsg+- PHP variable used).

;Store the last error/warning message in \$php_errormsg (boolean). `track_errors = On`
2. `tiki_p_view_integrator` (see general permissions) needed to view configured repositories
3. `tiki_p_admin_integrator` (see general permissions) needed to configure repositories and rules
