

## Trackers Details

As you have certainly read, the Trackers feature is a powerful, flexible tool for recording information about a collection of items.

One of this power is the use and the definition of several "field types".

## Field types

See [Tracker Field Type](#)

## How to go to a specific tab with an url

Add show=mod, or show=att or show=com or show=view to the url

tiki-view\_tracker.php?trackerId=1&show=mod tiki-view\_tracker\_item.php?itemId=1&show=mod tiki-view\_tracker\_item.php?itemId=1&show=att

## How to set a tracker (not a user tracker) to have the items only visible and editable by the creator (tw >= 1.10)

There are different ways to do that. But one way that can work

Create a tracker with the setting

Item creator can modify his items? yes

Add to this tracker a field

user selector type with an automatic field feeding with login (option 1)

Assign special perms to the tracker (if not the default configuration)

tiki\_p\_create\_tracker\_items for Registered

That's all. In tracker list, a user will sees only its items. He will be able to edit only his items. He will be able to create items.

An admin will be able to edit and see all the items and create new one.
