2nd example of indented text^

## Using Square Brackets

If you wish to include square brackets in your text (i.e. as regular text and not a link) simply add an additional open bracket to start. E.g.

[[this would not be a link]

Would render like this...

[this would not be a link]

## Non-breaking space

Use ~hs~~ to add the HTML " " for a non-breaking space.

## Entering code

You enter code blocks by enclosing the block between CODE ( ) and CODE tags (you need to put curly braces around the tags). Note this is a smarty construct, not a Wiki syntax.

### Useful Links
